Question: The bid spec states "For the first two events remove 6000 gallons". For bid purposes, how many gallons should I assume for each of the four remaining events?

Answer: All six events should remove at least 6,000 gallons of groundwater. If recharge will not allow the removal of 6,000 gallons, remove as much groundwater as possible in a seven hour period. For the first two events groundwater elevations should be taken during the draw.
